

RO WATER PURIFIER SYSTEM

RO water purifiers are based on mineral RO Technology with double purification to combine Reverse Osmosis (RO) and Ultraviolet (UV)/Ultra Filtration (UF) in a multistage filtration process. Reverse Osmosis (RO) removes dissolved impurities and retains essential minerals giving you 100% pure and safe drinking water without using any harmful chemicals.

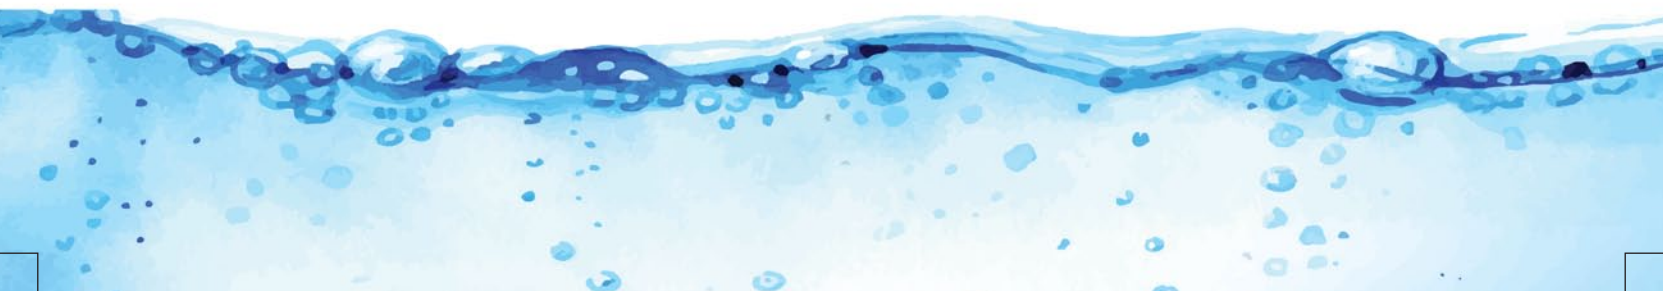

UV water purifiers use Ultra Violet (UV) radiation to disinfect water by deactivating deadly bacteria and viruses making the water safe for consumption.

UF based water purifiers are non-electric gravity water purifier system that are designed to provide safe and clean drinking water which are free of bacteria and cyst.

Our Best Selling Water Purifiers:

- | | |
|-------------|------------|
| Aqua Glance | Pure |
| Aqua Glory | Dolphin |
| Alive Water | Epic |
| Camry Black | FRP Vessel |
- Jumbo Filters**

Features : Patent Design | Imported Mould | Transparent Tank | 100% Food Grade Material | Unbreakable Poly-carbonate Glass
